Bridgeport Enhances E-Z Lock® Connectors with Advanced E-Z Edge™ Technology

Ideal for Prefab, Lighting Whips, and Repetitive Work; with a Newly Refined Snap-In Design and Inner Lock Ring, the 38ASP Installs Smoother, Holds Tighter, and Makes Adjustments Easier When the Job Changes

Huntersville, N.C., Nov. 4, 2026 – Bridgeport is proud to announce it has updated its popular 38ASP E-Z Lock® Connector with E-Z Edge™ technology. With a newly refined snap-in design and inner lock ring, the 38ASP installs smoother, holds tighter, and makes adjustments easier when the job changes.

"The 38ASP is built for electricians who want faster installs without sacrificing a solid, code-compliant connection," said Bryson Allen, Director of Product Management - Bridgeport. "Ideal for prefab, lighting whips, and repetitive work, the new and improved 38ASP provides even stronger snap-in engagement, smoother installation, and reliable electrical continuity, while E-Z Edge™ technology prevents conductor jackets from scoring during wire pull."

Additional 38ASP features include:

- Tool free installation
- Robust cable range
- Reusable for adjustments and rework

"The 38ASP's refined shape guides the fitting into place with less effort, while its improved lever action allows cleaner, more controlled removal during changes or

-more-

rework," Allen added. "The E-Z Edge™ technology provides confidence so that the installer will not be called back for rework after an inspection."

From rough-in to final trim and job after job, Bridgeport connectors are engineered to help electricians work faster, cleaner, and with confidence.
