SUN CHEMICAL CIRCUITS EXPANDS TEAM IN GERMANY

Midsomer Norton, England – May 17, 2007 - Sun Chemical Circuits has expanded the technical sales team for its Circuits business in Germany, Switzerland and Austria following a 20% increase in turnover during 2006.

The company, which is one of the world's leading suppliers of inks and resists to the printed circuit board (PCB) manufacturing industry, has appointed Frank Eirmbter as key account manager. Eirmbter joins Sun Chemical Circuits with over 25 years' experience in the industry.

Based in Krefeld, near Dusseldorf, his key objectives include driving continued growth of market share in Germany, Switzerland and Austria, and providing technical sales support to current customers.

Eirmbter, formerly with Wuerth Elektronik CBT, said: "I look forward to the challenge of developing the Circuits business further. We will continue to focus on our core business of supplying inks and resists to the PCB market, and at the same time, develop new products for new markets. We are committed to the manufacture and supply of Circuit products within Europe and keep the region at the cutting edge of the market."

Richard Martin, global vice-president, Sun Chemical Screen & Circuits, said: "Our share in the German Circuits market increased significantly again last year, and we will be working hard to build on this success. This appointment is another demonstration of our long term commitment to the market, and will allow us to continue to provide a high level of support and expertise to our customers in Germany."

Sun Chemical Circuits has approximately 35 - 40% market share in the overall European Circuits market. The company has been a supplier of inks and resists to the PCB industry for over 45 years and continues to adapt to the changing demands from its customers and OEM requirements.

The company has also appointed Mauro Preziosa to a similar role in Italy to further develop its overall European business.
