Kyzen's Chuck Sexton to Present at the 2010 Process Cleaning Expo

NASHVILLE — April 2010 — Kyzen, the world leading provider of environmentally responsible cleaning products for high reliability and high-technology manufacturing operations, announces that Chuck Sexton, Industrial Products Sales Manager, will present a case study titled "Conversion to Aqueous Cleaning from Trichloroethylene for a High Speed Stamping Process" at the upcoming Process Cleaning Expo, scheduled to take place May 4-6, 2010 at the Kentucky International Convention Center in Louisville, KY. The presentation will be held during Session T3, which will take place Tuesday, May 4, 2010 from 3:10-4p.m.

Due to EH&S issues, a large manufacturer of stamped/gear shaped steel parts for Tier 1/Tier 2 automotive applications was required to replace their large trichloroethylene vapor degreasers with efficient and safe aqueous cleaning processes.

The cleaning objectives were to remove both water soluble and insoluble stamping oils to a cleanliness level required for acid etching/coating/bonding procedures. This case study explains how this plant's goals were met and others can do the same.

Chuck Sexton is the Product Manager for Kyzen's Industrial Products business group. He has worked in the industrial parts cleaning industry, in both sales and engineering, since 1979, and has extensive experience in providing both equipment and cleaning chemistries.

Mr. Sexton holds a Bachelor's Degree in Chemical Engineering from the University of Illinois, and an M.B.A. from the University of North Florida.

###

Kyzen is a leading supplier of precision cleaning chemistries to the worldwide electronics, metal finishing, medical, semiconductor, and optical industries. Founded in 1990, Kyzen offers superior cleaning chemistries, technical support, application and analytical services throughout the world. Kyzen has won numerous industry awards for their exceptional products and all products are RoHS compliant. For more information, visit www.kyzen.com.
