Dage introduces new large board format X-ray inspection system

February 8, 2007, Fremont, California – Dage Precision Industries introduces its newest development in x-ray inspection technology, the Dage XiDAT XD7800 large board format digital x-ray inspection system. The Dage XD7800 has one of the largest inspection areas in the industry covering 24" x 30" and taking circuit boards up to 24.3" x 33" (617 x 838 mm) in size. It provides optimum resolution for large printed circuit board and device failure analysis and combines the features of the award winning XiDAT (x-ray integrated digital acquisition technology) with an industry leading inspection area.

Dage's new XD7800 offers oblique angle views of up to 70-degrees for any position 360-degrees around any point of the entire 24" x 30" (610 x 762 mm) inspection area. The superior image quality and enhanced feature recognition of the Dage x-ray tube combined with the advanced analytical capabilities of its easy to use ImageWizard software provides uncompromised world class inspection quality.

The XD7800 system is equipped with the Dage VR160 x-ray tube offering sub-micron feature recognition to 950 nanometers or optionally available with the Dage NT250 x-ray tube with sub-micron feature recognition to 250 nanometers. Real-time digital inspection can be achieved at either 1.3 mega pixel viewed on a 20" flat panel LCD display or 2.0 mega pixel viewed on a 24" flat panel LCD display with up to 7,400X magnification.

With US headquarters located in Fremont, California, Dage Precision Industries, Inc. manufactures and supports a complete range of award winning digital x-ray inspection systems and bond test equipment for the printed circuit board assembly and semiconductor industries.
