

Christopher Associates Announces Oven for Via Filling Cure

Christopher Associates (Santa Ana, CA) has introduced a new application for the C Sun SMO-7A oven. With the requirement for via fills to be cured at specific temperatures profiles; C Sun has incorporated new features into their popular photoimagable curing oven to allow customers to program a variety of ramp up – soak - cool down profiles. With the demand from manufacturers building HDI and sequential build up processes for tighter controls on their thermal curing ovens, this configuration fits well at a reasonable price.
