April 13, 2007

During the upcoming Nepcon Shanghai (April 24-27), Cogiscan and Fuji Machine Mfg. Co. Ltd. will be demonstrating the RFID Smart Feeder kit for the XP, which can help electronic manufacturers eliminate errors for traceability and line set-up verification. Demos will be available in the booths of all the major Fuji distributors in China, including:

- American Tec Co Ltd - 1D15A
- Ascentek International Company Limited - 1B21
- First Technology China Limited - 1C01
- Smartech Enterprise Co. Ltd. - 1G02

The RFID Smart Feeder for Fuji XP can help eliminate the risk of human error associated with manual barcode scanning during online and offline set-up validation task. The RFID Smart Feeder kit for Fuji XP also increases productivity and reduces manufacturing costs by reducing machine downtime during feeder replenishment and product changeover, in addition to reducing human errors. The RFID Smart Feeder for Fuji XP machine has been developed with Fuji Machine Mfg. Co. Ltd. and is specifically designed to meet high quality and reliability requirements of Fuji placement machine users. RFID Smart Feeder kits are also available for Fuji CP, IP and QP machines.

About Cogiscan - Cogiscan designs and manufactures material tracking systems for the electronics manufacturing market. The Cogiscan platform encompasses material identification with barcode and RFID technology, data acquisition hardware, and application software. Software applications include Real-Time Inventory, Traceability, Line Set-up Control and MSD Control. Cogiscan is dedicated to establish a global standard for material tracking in the electronics manufacturing industry. Sales and customer service offices and affiliates are located throughout the world, including the Americas, Europe, and Asia-Pacific.
