### **Cogiscan hires Japan Sales Engineer**

Bromont, Canada – Cogiscan is pleased to announce the hiring of Satoshi Inoue as Japan Sales Engineer.

Satoshi Inoue possesses a strong background in the PCB assembly industry. Prior to joining Cogiscan, he worked over 10 years for a leading SMT equipment provider in the areas of Quality Assurance, Customer support and Software System Solutions. Satoshi Inoue will be based in the new Cogiscan office in Nagoya, Japan and will focus primarily on supporting local customers and driving the company's growth in Japan.

Jim Weik, Cogiscan Asia Sales Manager, said: "I am excited to have Inoue-san join our team with his commitment to customer satisfaction and deep knowledge of the electronics manufacturing market place in Japan. Our customers in Japan will receive outstanding support from Satoshi Inoue. Over the past year in Japan, we have seen an increased level of interest for our products because Japanese OEMs require cost-effective, scalable and complete traceability solutions to achieve the demands of the market place and to protect their brand name reputation for high quality products. This is a great fit for our traceability software and RFID/barcode technologies. Our recent successes in Asia demonstrate that the level of interest is very high."

Satoshi Inoue, Japan Sales Engineer, commented: "I am thrilled to join such an innovative and fast-growing company and to be able to contribute to their future success in Japan. I am convinced that we have the ability to become the leading provider of tracking and traceability solutions in Japan because the Cogiscan platform is fully integrated and supported by leading Japanese equipment vendors. My role is to make sure that all electronics manufacturers in Japan become aware of the complete range of material control solutions offered by Cogiscan and their strategic partners."
