

Press release 2007-02

**Lackwerke Peters GmbH + Co KG increases production capacity for their ELPEMER® solder resists by 30 %.**

Lackwerke Peters GmbH + Co KG are successful worldwide in the field of special lacquers for manufacturing printed circuit boards and coating materials for electronics (assembled printed circuit boards/flat packs).

In view of the extremely positive growth in business of both the alkaline and polyalcohol developable photoimageable **ELPEMER®** solder resists, they have expanded their manufacturing equipment for **ELPEMER®** curtain coating and spray inks and increased the production capacity by 30%.

There was no need to extend the manufacturing buildings as the new **ELPEMER®** production hall built in 2002 was planned and built looking far enough into the future to offer a sufficient reserve of space.

Besides the rational combination of new and existing machines, they shall also be boosting the number of workers in this area in the short term. Consequently, their company is perfectly prepared for new challenges.
