***Introducing Datapaq's NEW Q18 6 Channel Data Logger –  
in Standard and Narrow Configurations***

*March, 2007* – The new Q 18 6-channel data loggers boast a fast USB connection, 18,000 readings per channel, high accuracy and rapid charging. Combined with the new thermal barriers, these loggers can profile narrow processes as well as those with low clearances. The Q18 profiles ovens with low entrances/baffles, provides exceptional resolution, downloads data instantly, comes telemetry-ready, and with rapid charging is always ready to go.

Founded in 1984 Datapaq provides key information on the effectiveness of heat processing. With the use of the most advanced and tested techniques for accurately gathering and storing information, Datapaq has created industry specific standards to analyze, synthesize and report information in a precise and succinct manner. Product lines include Oven Tracker, Furnace Tracker, Reflow Tracker, Kiln Tracker, and Multi Tracker. Recognized as an industry leader, these products serve automotive, finishing, can manufacturing, textile processing, ceramic manufacturing, PCB surface mounting, heat-treating, and food processing industries throughout the world.
