SEHO Systems to Display Highlight the GoSelective *light* at SMTA Atlanta Expo & Tech Forum

ERLANGER, KY — March 2010 — SEHO Systems GmbH, a leading worldwide soldering provider, will exhibit at the upcoming SMTA Atlanta Expo and Tech Forum, scheduled to take place Thursday, April 15, 2010 at the Gwinnett Civic Center in Duluth, GA.

Depending on the application, the **GoSelective *light*** is designed for standalone operation or as an inline system to be integrated into a fully automated production line.

During the process, the assembly remains on its position. The various workstations, i.e. the fluxer unit, and preheating and soldering unit that are mounted on a high-precision axis system, successively approach the solder joints. This allows flexible processing of assemblies up to 500 x 500 mm with absolutely reproducible results.

The GoSelective *light* offers an uncompromisingly high soldering quality and maximum flexibility particularly for small- and medium-sized production volumes. If throughput requirements increase, the system can be upgraded with an additional coordinate fluxing unit and/or preheating module to reduce cycle times remarkably.

The GoSelective *light* features a precise axis system for exact positioning of various workstations and is capable of on-line or offline teaching. Additional benefits include fiducial recognition and process visualization.

The high-grade and compact machine concept "Made in Germany" ensures absolutely reproducible soldering results at a small footprint and thus offers an economic alternative to traditional hand soldering processes.

Product literature will be distributed for all SEHO Systems' products. For more information about SEHO's full product line, visit SEHO at the SMTA Atlanta Expo & Tech Forum or visit www.sehona.com.

About SEHO Systems GmbH

Since its foundation in 1973, SEHO has become the worldwide contact partner whenever soldering is involved. Company solutions are based on performance, flexibility, efficiency and technical progress. SEHO's business activities and production organization are oriented according to the principles of sustained future-compatible development and production of machines. As a result, all applicable environmental standards are complied with meticulously. With its systems, the company provides customers with a sustained and resource economizing production facility. It continuously develops its technology in order to provide customers with a competitive advantage. For more information, visit www.seho.de.
