FOR IMMEDIATE RELEASE:

MANNCORP'S VERTICAL LIFT STENCIL PRINTERS DELIVER HIGH THROUGHPUT AND VALUE

Two similar high-precision vertical lift stencil printers, each with double-sided board-processing capability, are now available from Manncorp. The 4500R and the 5500R share many specifications and operational characteristics. However, the larger 5500R is air cylinder powered and offers a dual-squeegee shuttle with metal blades for faster processing and better ergonomics. Its 20" x 22" print area will accommodate larger boards and pallets. The 4500R print area is 16" x 18".

To meet the challenge of ultra-precise solder deposition required for today's fine-pitch sub-miniature devices, both systems offer a registration repeatability of ± 0.0003 ". Quick setup is made possible by self-locking precision X, Y and Theta adjustments, a sought-after feature among low to mid-volume assemblers seeking high flexibility without the necessity of investing in automatic printers.

System 4500R is internet priced at \$3,890; the 5500R is \$7,990. As a special incentive, Manncorp is including a 500g jar of lead-free solder paste and a certificate valid for a custom stencil – both items free with purchase of either printer. For details, access www.manncorp.com or sales@manncorp.com.
