Morgan Newton Hires Todd Kingrey as New VP of Marketing & Sales

PLANO, TEXAS ¾ March 2016 ¾ Morgan Newton Co, an established EMS provider with ISO-9001 and ISO 13485 (medical device) certifications, is proud to announce the recent appointment of Todd Kingrey as their new VP of Marketing & Sales. Kingrey is an industry veteran with over 30 years of experience in PCB Design, Fabrication, and Assembly.

Morgan Newton was established in 1975 and has operated for decades under the radar in Plano, Texas, focusing on a core group of loyal customers. With the addition of Mr. Kingrey, Morgan Newton hopes to expand its reach and let people know who they are.

“Morgan Newton is the best kept secret in contract manufacturing,” commented Mr. Kingrey. “They’ve done a great job of combining customer service with highly responsive manufacturing operations while upholding a reputation to be proud of. The Brand is solid. We plan on letting the secret out and getting people talking about us.”

Todd Kingrey, VP Sales & Marketing, Morgan Newton

Morgan Newton can deliver a complete, vertically integrated product that accelerates time to market, enhances customer satisfaction, and provides a highly flexible supply chain for a total electronic manufacturing solution.

Using the latest manufacturing and assembly equipment, Morgan Newton ensures precision and quality, and is totally committed to being flexible and seeking new and more efficient methods throughout their entire organization. IPC certified trainers keep team members versed in the latest electronics assembly standards that drive World Class Quality and key customer indices.

About Morgan Newton Co

Morgan Newton Company is an EMS provider located in Plano, Texas that started operations in 1975. The company did mostly private label electronic contract manufacturing for select OEMs until the late 1980s, when the company expanded its manufacturing capabilities with surface mount automation. As the company entered the 1990's, it recognized that OEMs were concentrating on core competencies, and that the market needed a greater offering of value added services, which it put in place ahead of the demand. This growth in value-added services gave the company a whole new operating platform and perspective in contract manufacturing. With an eye towards the future, the company has increased the number of surface mount lines, expanded supporting operations, achieved ISO 9001 and ISO 13485 quality certifications, and is keeping pace with the technology required to meet current and future demands. In 2007 the company built a custom 42,500 sq. ft. electronic manufacturing plant which houses some of the most advanced electronic manufacturing equipment.
