

## Mycronic has received a multiple SMT equipment order from US customer

Täby, 21 July, 2017 – Mycronic AB (publ), has received an order for several SMT systems from a customer in the US. The order, received in June, includes two MY300DX pick-and place machines and twelve SMD Towers, the intelligent storage solution. The order will be delivered during the fourth quarter of 2017. The total order value amounts to approximately SEK 17 million.

Mycronic's business area Assembly Solutions offers advanced production solutions for modern electronics manufacturing. The offering comprises production equipment for non-contact application of solder paste on circuit boards, dispensing and conformal coating systems, assembly equipment for placement of components on circuit boards, automated storage solutions, advanced software for effective process management and sophisticated production systems for camera module assembly and test. The equipment is used globally for a wide range of applications within the electronics industry.

The MY300 was launched in May 2017 as part of Mycronic's next-generation MYPro product line. The MY300 allows the customer to increase productivity within a 40 percent smaller footprint. It achieves higher speeds due to automatic job selection, rolling changeovers, as well as faster board transfer and tool changes. Throughput is increased significantly thanks to simultaneous assembly of multiple boards. Additionally, the improved linescan vision system ensures a future-proof solution for the most advanced components.

"Demands are constantly on the rise for higher degrees of automation, more component varieties and increased overall productivity", says Robert Göthner, VP SMT, Assembly Solutions. "The combination of the MY300, our material handling software and the SMD Tower enables our customers to get a high degree of automation – a concept we call Mycronic 4.0."
