Aegis to Showcase FactoryLogix Best-in-Class
Materials Management at IPC APEX EXPO 2017

Horsham, PA., January 2017 -- Aegis Software announces the exhibition of the latest generation FactoryLogix Manufacturing Execution Software (MES) at IPC APEX EXPO 2017 in San Diego this February 14th-16th. Aegis will demonstrate how FactoryLogix is helping customers drive operational efficiency with a uniquely comprehensive solution to materials management. Aegis will also discuss how the Company is supporting the IPC Connected Factory Initiative to develop a non-proprietary machine data interface standard that will enable Industry 4.0 benefits for our industry.

For over 17 years, Aegis has worked alongside customers to leverage manufacturing data, driving measureable improvements in manufacturing speed, control, and visibility. The latest release of FactoryLogix to be displayed this year's APEX EXPO incorporates an expanded Logistics module that facilitates incoming quality control, warehouse and dispatch control, resource scheduling and planning, and material tracking for complete visibility of the state of the materials within the factory in real time.

Aegis also invites you to discuss our role in the worldwide race to achieve the benefits of Industry 4.0. While the concept of Industry 4.0 has gained much attention in recent years, the technical approaches to achieving it have been solely proprietary and limited in nature.

Now, with the establishment of the IPC's Connected Factory Initiative, over 30 of the leading manufacturers, machine, device, sensor, and software companies are working together to develop a machine data interface standard known as Connected Factory Exchange (CFX).

Jason Spera, Chief Executive Officer of Aegis and Co-Chair of the IPC CFX committee says, "As the manufacturing industry turns its attention to unlocking the power of data through technologies related to Industry 4.0, Aegis is proud to support the IPC in developing a free and open data standard. Aegis' exhibition at APEX this year will reflect the industry's global shift of attention to digitization of the factory, and what manufacturers can accomplish through leveraging data connectivity."

We invite you to stop by the Aegis Booth #2521 at APEX to learn more.

About Aegis

Founded in 1997, Aegis Software is headquartered in a state-of-the-art development and training facility in Philadelphia PA. Aegis has international sales and support offices in Germany, UK, China and is partnered with 37 manufacturing equipment suppliers. With a global customer base of over 1700 factories across the military, aerospace, electronics, medical, and automotive industries, Aegis delivers a unique level of capability, value, and time-to-value for its manufacturing customers.
