

## Adhesive Transfer Tapes

### Polyonics Introduces New Adhesive Transfer Tapes at ICE 2017

Polyonics introduces a new family of adhesive transfer tapes at the International Converting Exhibition in Orlando 25-27 April. The tapes are designed specifically for high temperature bonding of electronic, transportation and general industrial components.

The solvent-based, double lined adhesives are available in acrylic and ultra-high temperature silicone. They provide thin profiles and high temperature resistances with flame retardant and thermally conductive options available.

Contact us for more information and to receive free samples.

Polyonics adhesive transfer tapes include double liners for ease of handling and die cutting, provide high bond strengths, are chemical resistant and ideal for use in high temperature and harsh environment applications.

## Polyonics at a Glance

Polyonics manufactures innovative, high performance coated film, tape, label and tag materials that withstand high temperatures and harsh environments while protecting products from ESD, heat and/or fire. The materials are used by converters and OEMs worldwide.
