FOR IMMEDIATE RELEASE

BTU to Demo Its New Dual Chamber Reflow oven and Industry 4.0 Advances at NEPCON China 2017

NORTH BILLERICA, Mass., March 16, 2017 — BTU International, Inc., a leading supplier of advanced thermal processing equipment for the electronics manufacturing and alternative energy markets, will exhibit in 1E43 at NEPCON China, scheduled to take place April 25-27, 2017 at the Shanghai World EXPO Exhibition & Convention Center. BTU will showcase the new PYRAMAX™ ZeroTurn Dual Chamber system and WINCON™ connected factory interface. The booth will also feature a PYRAMAX 150N.

The PYRAMAX ZeroTurn is designed for high volume electronics manufacturers who must also manage process mix and are dissatisfied with the poor process separation of other dual chamber machines. The true dual chamber machine eliminates turnaround/waiting time when switching thermal profiles. Unlike the competition, the ZeroTurn has the industry's best thermal isolation between chambers, allowing for precise process control and unaffected thermal uniformity.

BTU also is responsible for several recent advances that support Industry 4.0. These technologies include line control and communications, recipe development and energy savings software solutions.

WINCON is the industry's most powerful oven control system, with custom MES solutions, true plug-and-play interoperability, and easy integration with OT/IT systems. The interface includes BTU's RecipePro recipe generation tool and Energy Pilot Software.
