FOR IMMEDIATE RELEASE

CIREXX INSTALLS RECORD THIRD COBRA LASER

Santa Clara, CA, January 16, 2017. Cirexx International announced today that they have acquired and installed a third Excellon Cobra laser machine. The new machine is a hybrid Laser and is equipped with both CO₂ and UV laser technology. It is designed to "drill" holes, "rout" profiles and micro-

machine fine features in printed circuit boards and specifically Flex Circuits. The machine comes with the upgraded controller, latest software, High Speed Intelligent Scanners and variable power high pulse energy lasers.

Mike Sparidaens of Excellon said, "Cirexx currently has the largest installation of Cobra Lasers with three units in one manufacturing facility. Excellon has partnered with Cirexx since the 1980's and are extremely pleased with the addition of a 3rd COBRA Hybrid UV and CO₂ laser system. We look forward to being part of Cirexx's technology roadmap for many years to come.

Philipp Menges, Cirexx President/CEO commented, "While we use these Cobra lasers for many features on PCBs, they are primarily a critical component of our commitment to the continued development of Flex Circuit technology. And we realize that there are several alternatives for this type of equipment we do not consider anyone but Excellon. The quality of their machines means to me that they will be running like workhorses without downtime. Add the outstanding service that we receive from Mike and the Excellon crew and we have a true win-win."

About Cirexx International

Founded in 1980, Cirexx International, Inc. is an electronic solutions company offering PCB Design, PCB Fabrication and PCB Assembly of high-reliability Printed Circuit Boards, RF/Microwave Circuit Boards, Flexible Printed Circuits and Rigid-Flex Circuit Boards. Recognized as a time-technology leader, the company offers a genuine Quick Turn service and provides a one stop shop and all in-house solution known as *Seamless Integration*. Cirexx has expertise fabricating high layer count Printed Circuit Boards using a variety of substrates including a wide array of high-frequency RF-based materials in mixed (hybrid) constructions. Cirexx delivers unsurpassed quality and support to a large array of customers in the high-reliability markets of defense/aerospace, industrial, and medical instrumentation.
