Computrol receives prestigious Global Technology Award for its contract manufacturing services

MERIDIAN, IDAHO — October 2018 — Computrol, Inc., a world-class provider of mid- to low-volume, high-mix electronic manufacturing services to OEMs, announces that it was awarded a 2018 Global Technology Award in the category of Contract Services \$50 - \$100 million. The award was presented to the company during a Tuesday, Oct. 16, 2018 ceremony that took place during SMTA International.

Computrol's success is largely attributable to its ability to manufacture high quality products in small to medium lot sizes. The focus on lower volume electronic contract manufacturing has fostered the development of highly differentiated services that are specifically tailored to meet the unique needs of low volume contract manufacturing customers. This allows the company to be more flexible and provide assembly services with shorter cycle times.

Computrol has a long history of providing electronics contract manufacturing services and support to blue-chip customers ranging from military and medical electronics, to telecommunications and computer peripherals for more than 34 years. The company continues to build on its core services and capabilities by investing in versatile, high-speed manufacturing equipment and technology, as well as continuing training programs for employees.

Some of the company's recent investments include the Spea 4050 Flying Probe, a Nordson DAGE Ruby FP X-ray system, two MV-7 OMNI 3D In-Line AOI Machines from MIRTEC at each facility, and three KY-8030-3 in-line, fully automated SPI systems from Koh Young Technology.

Premiering in 2005, the Global Technology Awards program is an annual celebration of product excellence in electronics surface mount assembly. Premier products based on the finest examples of creative advancement in technology are chosen by a distinguished panel of industry experts.
