FOR IMMEDIATE RELEASE

EVS Exhibits Solder Recovery with InterLatin at SMTA Mexico Juarez Technical Forum

March 2017 — EVS International, the leader in solder recovery, today announced plans to exhibit with InterLatin on Table 17 at the upcoming SMTA Mexico Cd Juarez Technical Forum, scheduled to take place Thursday, April 6, 2017 at the Hotel Real Inn in Juarez Mexico. EVS will show the EVS 500LF Solder Recovery System with the same footprint as a printer, and aimed at multiple markets.

The customer with one lead wave and one lead-free wave, the customer who uses Nitrogen or wants to reduce their Nitrogen usage, the customer with selective solder pots who only removes small amounts of dross every hour or the customer with multiple waves where one EVS 500LF is connected to each wave.

EVS has continually improved the performance of the EVS units and the new EVS 500LF is no exception. With the new concept of improved performance plus the significant reduction in price, everyone can enjoy the savings that EVS solder recovery systems can offer. The EVS500LF is designed to ensure that the maximum recovery is maintained throughout the life of the wave solder system. Users can quickly recover up to 80 percent of pure solder with a higher ROI from the waste dross.
