

FOR IMMEDIATE RELEASE

26<sup>TH</sup> APRIL 2017

## **Fisnar Europe extends its range of QuantX™ dispensing consumables with the launch of four new manual syringe plungers**

Fisnar Europe, leading manufacturer and supplier of precision fluid dispensing equipment, has today announced the launch of its brand-new range of QuantX™ manual syringe plungers.

Available in four sizes – 3cc, 5cc, 10cc, 30cc, this new selection of hand dispensers has been designed to offer users a clean, comfortable alternative to conventional squeeze bottles and hypodermic syringes.

Using a Fisnar hand dispenser, all medium to high viscosity fluids can be dispensed including sealants, solder pastes, epoxies and grease. Users can control fluid deposits to dispense easily and accurately - without drips or oozing – and dispensing can be tailored to each specific application.

Fisnar syringe plungers are precision machined from aluminium to ensure a durable, long lasting product and are ideal for re-work, low-volume assembly and field work.

The ergonomic, and safety conscious design of the new syringe dispensers enables consistent fatigue free dispensing, and ensures that no potentially harmful adhesives or sealants will contact the user's skin.

Fisnar manual syringe plungers serve as a cost efficient dispensing solution since they are reusable and fully compatible with all Fisnar QuantX™ syringe barrels, pistons and dispensing tips.

First launched in 2012, Fisnar's QuantX™ range is premium dispense management system that has been manufactured to strict tolerance manufacturing standards, in order to provide turbulence free, accurate and repeatable dispensing.

The new Fisnar manual syringe plungers are available to order now. Please contact [infoeurope@fisnar.com](mailto:infoeurope@fisnar.com) to enquire.
