**FOR IMMEDIATE RELEASE**

## **Japan UNIX Launches Robotic Soldering Modules to Automate Soldering Operations**

**July 2016** — Japan UNIX, a solutions provide for manual and soldering automation, announces that it has incorporated core technologies from its accumulated soldering expertise into various soldering modules and unit products.

These soldering units enable existing machines to automate soldering operations. Any type of soldering robots must have feeders and a heating mechanism such as an iron tip soldering head or laser soldering unit. Soldering controllers manage both soldering temperature and the amount of solder alloy. Japan UNIX uses its many years of industry-leading experience to differentiate soldering modules, which provides numerous customer advantages.

For more information about the systems and options, visit [www.japanunix.com](http://www.japanunix.com).
