

## **Aegis Software to Exhibit Smart Factory Solution for Medical Device Manufacturers at MD&M West**

**Horsham, PA., January 2017** -- Aegis Software announces the exhibition of their industry-leading FactoryLogix Manufacturing Execution Software (MES) at the 2017 MD&M West Conference in Anaheim, California this February 7th-9th at Booth #3735. The company will demonstrate how its Smart Factory technology is currently helping medical device manufacturers increase speed to market via enhanced visibility into their factory operations.

As part of the conference's focus on manufacturing innovations that are building the "factory of the future," Aegis bring years of experience in helping medical device customers implement a paperless digital system that assists with achieving regulatory compliance, and provides complete product and process traceability. Aegis' FactoryLogix MES is currently in use worldwide at medical customers that include Sparton Corporation and Connor Electronics.

Jason Spera, Chief Executive Officer of Aegis says, "With trends such as the Industrial Internet of Things rapidly shaping the future of the medical industry, it's more important than ever for manufacturers to implement data-driven, automated processes to remain competitive. Exhibiting at MD&M West is a natural fit for Aegis as we're proud to be working with many medical customers to deliver measurable improvements in speed to market through better visibility into factory data."

### **About Aegis**

Aegis Software is the leading provider of innovative software solutions to improve speed, control and visibility throughout manufacturing operations. Founded in 1997, Aegis has 20 years of experience providing world-class software to customers around the globe. Our install base spans more than 1700 factory sites across the electronics, medical, automotive, military and aerospace industries.
