Nathan Trotter & Co. Acquires LOCTITE® Solder Bar Division of Henkel Electronics

Coatesville, PA – January 2017 – Nathan Trotter & Co. Inc. is pleased to announce the acquisition of the LOCTITE® solder bar division of Henkel Electronics. Prior to the acquisition, Nathan Trotter produced all LOCTITE® solder bar sold in North America on behalf of Henkel Electronics. Effective immediately, LOCTITE® solder bar will be produced and sold under the Nathan Trotter name. Nathan Trotter has partnered with E-Tronix (www.e-tronix.com) as the master representative to facilitate the transition.

As a result of Nathan Trotter's already large presence in the tin industry, the acquisition is expected to generate significant sales and production efficiencies in the electronics assembly industry for tin/lead and lead-free solder alloys. Purity, performance and quality will remain at the same high standards set forth under the LOCTITE® brand, while minimum order quantities will be reduced for the benefit of the customer.

“While we enjoyed our successful relationship with Henkel producing LOCTITE® solder bar on their behalf, we look forward to showing the electronics assembly market the benefits of working directly with Nathan Trotter for solder bar and recycling services,” said Luke Etherington, Vice President of Nathan Trotter & Co.

For sales, support, or additional information about the acquisition, contact Nathan Trotter & Co. at 610-524-1440 or email info@nathantrrotter.com.

About Nathan Trotter & Co.

Founded in 1789, Nathan Trotter has grown to become the largest tin manufacturer in North America. ISO 9001 certified since 1997, Nathan Trotter currently serves the Automotive, Aerospace, Electronics, Plating, and Chemical industries globally. Please visit www.nathantrrotter.com for more information.

Operating as the recycling division of Nathan Trotter & Co., Tin Technology and Refining is a world-class secondary tin refiner, serving the electronics assembly and recyclable non-ferrous industries. Tin Tech processes solder dross, solder paste, chunk, ingots, pot dumps, and contaminated debris from electronics assembly and industrial processes. For more information, we encourage you to visit us on the web at www.tintech.com.
