Technology Days at Rehm: Experience the solutions for the Smart Factory on the Technology Islands at Rehm

Rehm Thermal Systems will present innovative concepts for the digital factory at its Technology Days on 10 and 11 October 2018 in Blaubeuren. Rehm will take the guests on an exciting journey to the “Islands of Technology”, which will be the central theme of this year’s programme. The most interesting hot spots in electronics production and the world of surface mount technology will be addressed. Rehm will also provide information on where the path in assembly production is heading and show the way through the digitisation jungle.

Faster, smaller, cheaper – these are the requirements for the electronics industry. In addition, the electronics manufacturing sector faces the challenge of developing new innovative products as quickly and efficiently as possible. This will be the setting for Rehm’s Technology Days: Visitors can look forward to receiving information on the added value of soldering, coating, testing and drying electronic assemblies. With a total of eight specialist presentations on topics such as industry 4.0, digital transformation and sensor technology, Rehm will be providing answers to the current questions of the industry. In the Rehm Technology Centre, you will be able to see first-hand the technical and economic advantages that can be gained from intelligent processes in everyday applications.

Furthermore, Rehm’s experts will be standing at the ready to answer any complex questions. “Our Technology Days offer users and experts the opportunity to enter into a practice-oriented dialogue,” said Managing Director Johannes Rehm. “We are excited to offer a platform to cultivate existing contacts and make new ones.”

About Rehm Thermal Systems

As a specialist in thermal system solutions for the electronics and photovoltaics industry, Rehm is a technology and innovation leader in state-of-the-art, cost-effective manufacturing of electronic assemblies. As a globally active manufacturer of reflow soldering systems with convection, condensation and vacuum, drying and coating systems, functional test systems, equipment for metallisation of solar cells as well as numerous customised systems, we have a presence in all key growth markets and, as a partner with more than 25 years of industry experience, are able to implement innovative production solutions that set new standards.
