New Extraction and Filtration System Concept at SMT Hybrid Packaging 2017

ULT AG, world-class vendor of air technology systems, will introduce a new extraction and filtration device generation at SMT Hybrid Packaging trade show in Nuremberg/Germany. From 16 to 18 May visitors may receive first-hand information on the modular system concept for small and medium pollutant quantities.

Extraction and filtration units are utilized for air purification in electronics manufacturing. They remove airborne contaminants contained in emissions, such as laser fume, soldering fume, adhesives or welding fume.

Due to its modular design, the new device generation achieves an unrivalled level of flexibility, as the systems can be adjusted to changing production conditions according to the pollutant type and quantity.

The all-new vacuum stabilization guarantees a constant capture rate, with the unit increasing performance should the filters become saturated. The units are also capable of maintaining the required performance level even if there are several capturing elements, such as extraction arms or hoses attached to the system.

Additional features await discovery ...

As in prior year, ULT's long-term sales partner IVH Absaugtechnik will be co-exhibiting. The company will present the IAT 1200, the worldwide first worktable for barrier-free ESD protection. Interested parties are invited to find out more about the benefits of the interplay between ionization and extraction/filtration technology, completed by a multitude of add-on functions, on one table.

About ULT AG:

Founded in 1994, ULT AG is a leading vendor of high efficiency industrial air filtration systems and dust collectors. The broad range of equipment has been designed for use in many industries such as machine construction, electronics production and general manufacturing as well as medical, covering a wide range of applications. The product range offers standard products as well as custom-built units for special applications. ULT AG provides customers in Europe, Asia, North America and Australia with extraction and filtration systems for material processing by means of laser, soldering, welding etc. as well as onsite services. The company has been DIN EN ISO 9001 certified for more than 15 years. Additional information on ULT and its products can be found online at www.ult.de.
