FOR IMMEDIATE RELEASE

JBC releases the Fume Extractor FAE, the most efficient solution to avoid solder fumes

Barcelona – 20th July. **JBC takes fume extractors to a higher level with its new smart Fume Extractor FAE. Designed for electronics soldering applications, it is capable of removing fumes safely and efficiently.**

Fume extraction is a must when you are exposed to solder fumes, whether leaded or lead-free. **Health risks come with extended exposure to solder fumes, so it is important to use the correct safety equipment** to remove these hazardous substances.

The Fume Extractor FAE2-5A is the **unique system that optimizes fume extraction operating only when needed**. The FAE automatically starts working when the tool is in use. This function saves power and the life of the equipment as well as the filter.

In addition, an **innovative vacuum system integrated into the stand** absorbs the fumes when the tool is at rest.

This portable system can be used simultaneously in **two work areas** and guarantees an extraction volume of 290 m³/h (170.7 CFM) and a strong vacuum of 6,1 KPa (0.88 psi).

It contains a **compact 3-layered filter** (pre-filter M5, H13 filter + activated carbon filter) for **removing fumes, gases and even the smallest particles** that are produced in different working processes, increasing safety.

It also allows fast and easy replacement and **effective system maintenance**. The unit notifies through both the display and the LED when filters must be changed.

ABOUT JBC TOOLS

Since 1929, JBC has been at the forefront in developing soldering and rework tools for electronics professionals. JBC is now a worldwide renowned brand offering a wide range of products specially designed to meet every operator needs and applications. JBC has headquarters in Barcelona, Spain, and branches in St. Louis, MO USA, in Guadalajara, Mexico, Hong Kong and Shanghai, China, guaranteeing a quick and efficient service with a distributor network covering the 5 continents.
