

## **Aegis Software Brings Smart Factory Technology with New FactoryLogix R3 MES Software at SMTA Mexico Show**

**Horsham, PA., September 2016** -- Aegis Software will demonstrate the latest version of their market-leading manufacturing operations management software, FactoryLogix R3, at the Surface Mount Technology Association (SMTA) Mexico show in Guadalajara this October 5th-6<sup>th</sup>. This third release of the company's flagship solution introduces an entirely new suite of factory-wide material Logistics components to the market and embraces the principles of Industry 4.0 and a Smart Manufacturing environment.

These new features will extend the overall functionality of FactoryLogix, with capabilities that include incoming quality control (IQC); resource scheduling; production planning; materials planning; materials receiving and labeling; material kitting and dispatch; material tracking; and part replenishment and reorder. The latest release of the software also includes a mobile logistics app that allows operators to perform transactions at point of use, increasing their mobility throughout the factory floor and stock room.

The features of FactoryLogix R3 enable an overview of the state of the factory in real time so that planners can make the best use of the materials and resources they presently have on hand. This is an area where many traditional Enterprise Resource Planning (ERP) and Materials Resource Planning (MRP) solutions fall short, since these systems are designed to respond to a long-term planning environment that includes sales forecasts, product development lifecycles, and distribution channel concerns.

FactoryLogix R3 responds to the current reality of the materials that are actually in the stockroom and the ever-changing demands of customers to support a configure-to-order factory model. The MES software integrates with and compliments any existing ERP/MRP systems for complete visibility into materials and production on the factory floor.

To learn more about how your organization can bring greater speed, control, and visibility to your manufacturing operations, stop by the Aegis booth at the SMTA Guadalajara show for a one-on-one meeting with an Aegis representative.
