For Immediate Release

NPI Technologies to Install New Nitrogen Generator from South-Tek Systems

DALLAS, TX — August 2019 — Southwest Systems Technology, Inc., the leading manufacturing resource for the Southwest, is pleased to announce that NPI Technologies has purchased a Nitrogen Generator from South-Tek Systems for its facility in Dallas. NPI Technologies offers complete turnkey manufacturing services to defense/aerospace, telecom/data communication, networking, semiconductor, medical, high-tech consumer electronics and industrial control customers.

South-Tek's Nitrogen Generators are ideal for a vast range of electronic manufacturing, military, lab, and commercial applications. The sale was facilitated by the Texas-based manufacturers' representative Southwest Systems Technology.

NPI selected South-Tek's Nitrogen Generator after extensive cost analysis and research within the industry. The team found that the machine was not only competitively priced but also had great reviews. Along with the service and response from Southwest Systems, it was an easy decision for NPI. This unit allows NPI the flexibility needed to continue its current growth and properly service clients on time with superb quality.

Kiet Q. Thai, Operations Manager – Dallas, NPI, commented, "NPI is dedicated to reinvesting within and this Nitrogen unit is another step in helping us achieve our goal. We would highly recommend Southwest Systems to anyone looking for information and purchasing any electronic manufacturing equipment."

Nitrogen Generators are an efficient and green solution to meeting Nitrogen Gas needs. Facilities that install South-Tek's N2 GEN systems or commercial systems experience lower operating costs while producing higher quality Nitrogen Gas on-demand at the point of process.

Because the Nitrogen Generating Systems eliminate the necessity of converting N2 gas into liquid form for transportation and delivery, they consume far less energy than the alternative bulk gas supply. For more information, visit www.southteksystems.com.

NPI Technologies is a Minority & Women Owned Electronic Contract Manufacturing Company providing high quality, cost effective solutions. For more information, visit www.npитеchnologies.com.
