Scienscope to Present at Restronics Northern Cali Technology Showcase

Chino, CA — September 2018 — Scienscope International, a leading American supplier of cabinet style micro-focus X-ray systems, announces that Don Jeka will present at the Restronics Northern California Technology Showcase, scheduled to take place Wednesday, September 19, 2018 at the Embassy Suites in Milpitas, CA. Jeka will present: “How accurate Component Counting Can Improve Inventory Management and Save Time and Money in the Production Environment.”

The benefits of accurate component inventory numbers go well beyond simply knowing what you have in stock. In this presentation, both the obvious and quantifiable tangible benefits of maintaining accurate inventory controls are combined with the less-obvious intangible benefits, creating a compelling portrait of why component counting using X-ray technology is becoming the preferred solution to an old problem.

Jeka is the National Sales & Marketing Manager for Scienscope’s X-ray Division. He is a sales and marketing veteran with more than 30 years of sales experience including 15 years selling capital equipment, and developing and managing distribution and sales. Jeka is proficient in all aspects of business from owning/running a multimillion dollar company.

About Scienscope International

Scienscope was founded in 1994 to meet the growing need for reliable and affordable general-purpose optical and video inspection solutions for the electronics and PCB industries. The company began with basic stereo zoom microscopes used for SMT inspection and rework of circuit boards and electromechanical assemblies with a commitment to quality, value and support. Over the past 20 years, Scienscope has evolved to become a complete inspection solution provider, offering both offline and inline X-Ray systems, Video coordinate measurement systems, Video inspection systems, and microscopes to meet a wide variety of applications and manufacturing quality requirements.
