**FOR IMMEDIATE RELEASE**

### Thermaltronics Celebrates a Decade of Success

**PERTH, AUSTRALIA — March 2018** — Thermaltronics, the leading manufacturer and supplier of a wide range of soldering products and accessories in the electronics industry, will celebrate its 10th year in business this year.

This milestone has seen the development of a range of hand soldering products, using the unique Curie Point technology and a full selection of accessories to provide customers worldwide with production, rework and repair equipment to meet today's demanding electronic environment.

The latest equipment from Thermaltronics includes a new Solder Robot that has features and benefits not seen on other robotic hand soldering systems.

The company has facilities in New York, Hong Kong, China and Australia, and a worldwide distribution network.

While Thermaltronics may be a new entry to the electronics manufacturing market, the company has an experienced management team, comprised of former management and operating personnel from Metcal®/OKI and a high-tech factory, located in a Science Park outside of Beijing, China.

Design and development of products is conducted in the USA and Australia and, with the experience gained over years of involvement in the electronics manufacturing industry, subtle changes and improvements in product efficiency have resulted in a range of products that incorporate end user input and enhanced performance.

While mindful of cost concerns, Thermaltronics has streamlined production and can provide products at the highest levels of safety certification from an ISO 9000 & ISO 14000 facility. Coupled with the emphasis on quality, Thermaltronics is one of the most competitive suppliers in the industry, thereby affording customers "cost down" instead of "cost up."
