New iineo+ Placement Machine Expands Capability & Capacity at Trizo.

Somerset-based contract electronics manufacturer Trizo Ltd has added a new placement platform to its surface mount assembly line. Choosing the iineo+ from Europlacer adds additional capacity and extra technology capability to the company's growing customer offer.

Europlacer's popular iineo+ placement platform

The AS9100-accredited business provides a broad scope of electronics manufacturing services from NPI to volume production, specialising in short lead times for high-complexity electronic and electro-mechanical assemblies. The addition of the twin-turret iineo+ machine complements the range of equipment on the company's production floor to enable faster and more accurate component placement, address a wider range of component profiles from 01005 to 50mm², and deliver greater manufacturing flexibility.

In addition, the iineo+ platform leads the industry with its on-machine inventory capacity, comprising 264 x 8mm reels and integral matrix trays. This virtually eliminates changeover time by allowing a vast range of components to reside on the machine for immediate deployment as new board types arrive.

“This advanced technology investment will keep us competitive by shortening manufacturing lead times to assemble boards, delivering cost savings and maintaining our high-quality standards,” says Mike Nicholson, Managing Director at Trizo. “With customers in demanding high-reliability sectors such as aerospace, automotive, medical and nuclear, quality in our manufacturing service is essential,” he explains.

About Blakell Europlacer

The Blakell Europlacer Group comprises the Speedprint Technologies, Europlacer, and Blakell Europlacer Distribution business units. All three are active and pre-eminent in the electronic circuit board assembly sector with advanced product and service solutions for electronics manufacturers in the UK and globally. Speedprint Technologies is a provider of screen printing equipment used in surface mount assembly processes. Europlacer is a provider of surface mount component placement equipment. Blakell Europlacer Distribution augments the provision of screen printing and pick & place platforms in the UK with a range of associated equipment, including AOI, reflow and PCB handling.
