Aegis Industrial Software Corporation to Showcase Solutions Portfolio at AT Expo Chicago, Booth # 5812

Philadelphia, PA – Aegis Industrial Software Company (Aegis), the leader in Manufacturing Information Management Systems will showcase their latest product portfolio at the AT Expo, Chicago, September 26th-28th, Donald E. Stephens Convention Center, Rosemont, booth # 5812.

Aegis offers innovative software systems for absolute control and traceability in the electronics manufacturing enterprise. Fully integrated, enterprise-capable software enhances new product introduction (NPI) through manufacturing execution (MES). On the factory floor, 100% web based systems deliver paperless documentation, verify material setups for placement equipment and workstations, track product, collect defects to ensure quality, assist repair, analyze quality metrics, and monitor machine and line performance. Factory office solutions include CAD conversion into machine programs, routing development and assembly documentation. Flexible bill of material analysis and archival, revision control, AVL/AML management, and electronic approval and release cycles offer total product data management. Companies utilizing Aegis' Manufacturing Information Management System benefit from centralized data access for comprehensive product process traceability and dynamic analytics rich in content.

Aegis is also the creator of xLink Framework Technology, a unique alliance with equipment vendor's which has made possible a commercially viable, uniform means of data collection from varied machinery, built on the IPC CAMX data content standards. When embedded on assembly, test, measurement, and inspection equipment, the xLink Framework turns machine vendor machines into mini-web servers, providing simplified access to all of their operations, processes, and product data. The xLink Transmitter also supplies manufacturers with a cost effective, commercial, vendor-independent and reliable method of accessing data in standardized IPC CAMX, making it interpretable to any third party software system they require. Through partnerships stretching back 10 years, the Aegis xLink technology has made the dream of plug-and-play machines in the factory a reality with the emergence of universal data acquisition.

About Aegis Industrial Software Corporation:

Aegis develops manufacturing information management systems for the electronics assembly industry. Aegis software manages new product introductions, materials and line setup validation, manufacturing execution, quality and rework, and total product and process traceability across a company's global enterprise. Company headquarters is located in Philadelphia, Pennsylvania, USA with sales and customer service affiliates throughout the world.
