SGS is pleased to announce the successful AS/EN9120 registration of MVR International, Inc. MVR International, Inc. is the third distributor of electronic components to receive the AS/EN9120 certification in Florida, and among the first twenty in the United States.

Founded in 1994 in Tamarac, Southern Florida, MVR International Inc. rapidly imposed in this very competitive market thanks to its high quality customer service and its outstanding knowledge of the electronic world market. This corporation has established offices and logistics centers all over the world to better serve its constantly growing international customer base. Additional warehouse and logistics sales offices are located in Europe, Asia, and South America along with a logistic center in Hong Kong.

Along with becoming AS/EN9120 certified, MVR International received ISO 9001:2000 certification in December 2003. In early 2006, the company also received a Certificate of Appreciation from NASA's prime subcontractor for Space Shuttle Operations United Space Alliance.

"Being AS9120 certified is an essential element of our quality commitment to the military and aerospace industries" said Mikki Khallouqi, President of MVR International. "This standard is considerably more stringent than ISO 9001:2000. It requires particularly close control with regard to assuring the quality and traceability of products, and it is becoming a mandatory requirement for many companies that have made this certification a cornerstone of their suppliers' quality program".

The dedication and commitment behind this achievement originated with the key players at MVR International, Inc. The senior leaders helped to develop and drive the project, their enthusiasm and determination spreading quickly throughout the rest of the team, and the company at large. This commitment to the AS/EN9120 process and the resulting improved quality practices became clearly visible at all levels of the MVR International, Inc. organization.
