## **Nordson ASYMTEK Presents Integrated Jetting Systems for Conformal Coating and PCBA at SMT Hybrid Packaging Nuremberg, Stand 7-109**

*Award-winning Quantum Q-6800 will jet underfill for microelectronics manufacturing in the Future Packaging Line, Stand 6-434*

Carlsbad, CA, USA – 20 April 2016 – [Nordson ASYMTEK](#), a Nordson company (NASDAQ: [NDSN](#)), will present a triple-valve, closed-loop system to jet conformal coating, a UV oven to cure it, and an automated coating inspection system to verify the coating results at the SMT Hybrid Packaging Show in Nuremberg, Germany, in the SmartTec stand 7-109 from 26-28 April 2016. Nordson ASYMTEK's award-winning Quantum® Q-6800 high-performance, large-format dispensing system will jet underfill as part of the show's Future Packaging Line at stand 6-434.

Demonstrations include the new [NexJet® 8](#) and [IntelliJet®](#) jet valves with the [ReadiSet™ Jet Cartridge](#) ([click here](#) for video). The NexJet 8 handles abrasive fluids, has a long wear life, and dispenses consistent dot volumes for a wide range of fluids used in microelectronics manufacturing. The IntelliJet is a piezo jet that dispenses small dot sizes at high frequencies without compromising the precision, high yield, and long-term reliability needed for flip chip underfill and advanced semiconductor packaging applications. The IntelliJet advances piezo-jetting technology with long-term reliability up to 3 times longer than other piezo-driven jets. Both jets use Nordson ASYMTEK's ReadiSet 2-piece jet cartridge that is fast and easy to clean. Its short fluid path minimizes fluid waste and clogging.

“Nordson ASYMTEK provides complete, closed-loop dispensing solutions. With our proven process controls we ensure that your process, whether for dispensing or conformal coating, gives precise, reliable, consistent results,” said Michel van de Vijver, general manager EMEA for Nordson ASYMTEK. “Combined with our new easy-to-clean jets with a longer life, you can increase your throughput and the quality of your results while reducing your total cost of ownership.”

### **About Nordson ASYMTEK**

[Nordson ASYMTEK](http://www.NordsonASYMTEK.com), a world leader in precision fluid dispensing, conformal coating, and jetting technologies, designs and manufactures dispensing and coating systems, supported by an award-winning global applications and service network for over 30 years. To find out more, visit [www.NordsonASYMTEK.com](http://www.NordsonASYMTEK.com), or on social media.

### **About Nordson Corporation**

Nordson Corporation delivers precision technology solutions that help customers succeed worldwide. Precision dispensing of [adhesives](#), [coatings](#), [sealants](#), [biomaterials](#), and other fluids, [plastic extrusion](#) and [injection molding](#), [electronics testing and inspecting](#), and surface preparation are supported by applications expertise and direct global support. Nordson serves consumer non-durable, durable and high-technology markets, specializing in packaging, nonwovens, electronics, medical, energy, transportation, construction, and product assembly. Founded in 1954, headquartered in Westlake, Ohio, USA, Nordson has operations and support offices in 30+ countries. Connect with Nordson at [www.nordson.com](http://www.nordson.com) and on social media.
