

[San Francisco Circuits](#) (SFC), a provider of PCB fabrication and assembly, has just announced the company is now offering expanded [PCB tolerances](#) for standard and advanced technology circuit boards. San Francisco Circuits specializes in offering high-yield PCBs in all kinds of applications that meet rigid design and performance specifications.

San Francisco Circuits' specialty is in providing solutions to the most complex design challenges and ultra-demanding applications—be that high-heat, critical-reliability, or even up to military standards if needed. Their tolerances are built within valid IPC guidelines and standards, typically IPC-A-600 Class 2 standards that should be followed to help minimize issues that could affect performance.
