In manufacturing, maintaining compliance is crucial, and documenting non-conformances is an essential part of the quality management process. Tracking NCRs externally, whether in spreadsheets or separate software, can be time-consuming and prone to errors. Cetec ERP eliminates these challenges by offering native NCR functionality out of the box, seamlessly integrating it into standard manufacturing processes.

Cetec ERP's QMS module incorporates NCRs directly within the manufacturing company's processes, linking them to the source inspection. When a failed inspection occurs during production or receiving, an NCR is automatically generated, populated with relevant data from the source failure. The system allows for the upload of supporting data and documentation, enabling the generation of comprehensive NCR reports that include root causes, dispositions, and resolutions. NCRs are then able to easily be escalated into a Corrective or Preventive Action Report (CARs or CAPAs).

The integrated nature of Cetec ERP's QMS module provides real-time visibility into production progress, empowering managers to proactively address potential issues before they escalate. By identifying trends, analyzing root causes, and implementing corrective actions promptly, companies can improve customer satisfaction, boost confidence in audits, reduce costs associated with quality issues, and enhance employee efficiency in managing the NCR process.

Cetec ERP's intuitive interface and comprehensive features empower manufacturers to take control of their operations, regardless of regulatory requirements. By leveraging

powerful tools like NCRs, companies can effectively and efficiently manage quality management processes, ensuring compliance and driving operational excellence.

ABOUT CETEC ERP:
Cetec ERP is disrupting a stagnant, high dollar industry that has resisted change for decades. Since 2015, and without any major marketing initiatives or venture capital funding, Cetec ERP has independently migrated hundreds of companies off legacy technology platforms like Oracle and NetSuite, saving companies hundreds of thousands of dollars, onto a new generation of lower cost ERP technology.
