

Press release

Cimetrix Launch First Connectivity-as-a-Service Offering in December 2nd Webinar

Jabil Vice President of Manufacturing Technology and Innovation Dan Gamota will join Cimetrix Vice President Ranjan Chatterjee for a launch webinar moderated by Forbes and Entrepreneur writer and industry journalist Philip Stoten on December 2nd at 9am Pacific, 12 noon Eastern, 6pm in the UK and 7pm in Central Europe.

Ranjan Chatterjee explains; “The manufacturing industry desperately needs to connect their lines to realize the benefits and dividend of smart manufacturing or Industry 4.0. We have spent far too long talking about it and not doing it and the time for action is right now. Concerns over standards and complexity have overwhelmed the industry causing ‘analysis paralysis’. High costs and fear of making the wrong investment has slowed adoption, but there is a solution, a way to connect every machine in the line, regardless of vendor, regardless of protocol, and with no capital investment whatsoever!”

The solution is CaaS, or Connectivity-as-a-Service. This webinar will explore the need to connect and the digital dividend that can be delivered with two executives who have been connecting lines for decades. Dan Gamota, now Vice President, Manufacturing Technology and Innovation at Jabil and Ranjan Chatterjee, Executive Vice President Smart Factory Solutions at Cimetrix have worked together on solutions to connect lines and derive simple tangible ROI.

Who should attend:

- Anyone wanting to connect an SMT line in a manufacturing factory.
- CFO's who want to see value for their digital transformation investment.
- Factory or line managers who want to improve their performance.
- Anyone in the C-Suite who wants to improve factory performance.

What you'll learn:

- Why should I connect every machine on my line or in my factory?
- How can I connect machines that have different standards?
- How can I avoid a large capex expenditure?
- What is the simplest, fastest and cheapest route to a connected line or factory?
- The simplest and fastest route to scale connectivity across multiple lines and locations.

About Cimetrix

Cimetrix® software products connect hundreds of thousands of smart manufacturing equipment in the world's most advanced factories. Since 1989, Cimetrix has been at the forefront of robotics, factory automation and smart manufacturing technology.

Today, Cimetrix is the leading worldwide provider of equipment connectivity products for smart manufacturing and Industry 4.0. These products reliably and cost effectively enable manufacturing equipment and factory software systems to connect and communicate over factory networks, providing the necessary model-based data and control capabilities that result in millions of dollars in manufacturing productivity benefits.

Cimetrix actively participates in and leads many of the equipment connectivity standards activities throughout the electronics, LED, photovoltaic and semiconductor industries, including SEMI, OPC Foundation, iNEMI, TPCA, and IPC.
