For immediate release – April 29, 2021:

Virtual Program Announced for International Conference for Electronics Hardware Enabling Technologies (ICEHET)

Minneapolis, MN - The SMTA is pleased to announce the International Conference for Electronics Hardware Enabling Technologies (ICEHET) is scheduled 2-3 June 2021 as an express virtual event.

The program will feature presentations on current topics and challenges involving electronics materials, components, assembly and reliability of the products that have become essential in many aspects of modern life. Presentations range from 20-30 minutes in length, with time allotted for a live Q&A session with each speaker.

Directors from four industry consortia will discuss current research efforts throughout the conference. International Electronics Manufacturing Initiative (iNEMI), High Density Packaging User Group (HDPUG), Centre de Collaboration MiQro Innovation (C2MI), and Advanced Research in Electronics Assembly (AREA) Consortium will be represented.

Registration is now open for both the conference and sponsorship opportunities.

Visit the event website at <https://smta.org/icehet> for more information or contact Jaclyn Sarandrea, jaclyn@smta.org, with questions or comments.

SMTA – A Global Association Working at a Local Level

SMTA is an international network of professionals who build skills, share practical experience and develop solutions in Electronics Manufacturing (EM), including microsystems, emerging technologies, and related business operations.
