

Dusslingen,

### **Eutect goes live with new company website**

**Eutect GmbH, a leading supplier in the field of special selective soldering automation, is pleased to announce the successful launch of its new corporate website. The website offers a modern design, improved usability and comprehensive information on the company's products and services.**

With the relaunch of its website, Eutect is pursuing the goal of offering its customers and partners an improved digital experience. The new website is characterized by a clear structure and intuitive navigation that allows users to access relevant information quickly and easily. "The fresh and contemporary layout of the website reflects the innovative strength and technological progress that Eutect stands for. The website also brings the theme of innovation, which is part of Eutect's DNA, back to the top. This will be emphasized repeatedly with content but also with interactivity in the coming months. Innovation and qualitative development of the selective soldering process will be a central part of the website," says Florian Schildein, responsible for Eutect at the B2B marketing agency Butter and Salt.

Thanks to the clear navigation and responsive design, the website is easy to use on both desktop computers and mobile devices. Detailed product descriptions, technical specifications and extensive video material offer users a comprehensive insight into Eutect's portfolio of selective soldering systems. Extensive information is available in separate website areas for process technology as well as automation and kinematics. Detailed information has also been integrated into the new website for system integrators who use individual modules from the Eutect portfolio. Regular updates on company news, application examples and technical product and process innovations keep visitors up to date at all times. The digital module construction kit has also been modernized and integrated into the new online presence, such as the new video archive.

"Our new website is another step in our digital transformation and reflects our commitment to providing our customers with the best possible service," says Matthias Fehrenbach, Managing Director of Eutect GmbH. "We are proud to present a platform that highlights our technical capabilities and our commitment to quality and innovation. Visit the new website at <https://eutect.de/en/> and discover the diversity of our products and services. We invite all customers, partners and interested parties to explore the new features and content and get in touch with us."

#### **About EUTECT**

For over 25 years, soldering and joining systems have been developed, manufactured, installed, and programmed at EUTECT as well as at customers operating worldwide. The Swabian team of experts offers an extensive, constantly evolving module construction kit for process solutions in the field of soldering.

Process-related and commercially optimal modules for the task description will be selected from a wide variety of soldering-technology process modules and combined into proven stand-alone, revolving, or inline production designs for complete solutions.

The EUTECT module construction kit shows that a slim, individual solution comprising proven building blocks for a customer product's task description can often be achieved via individual modules or free combinations.

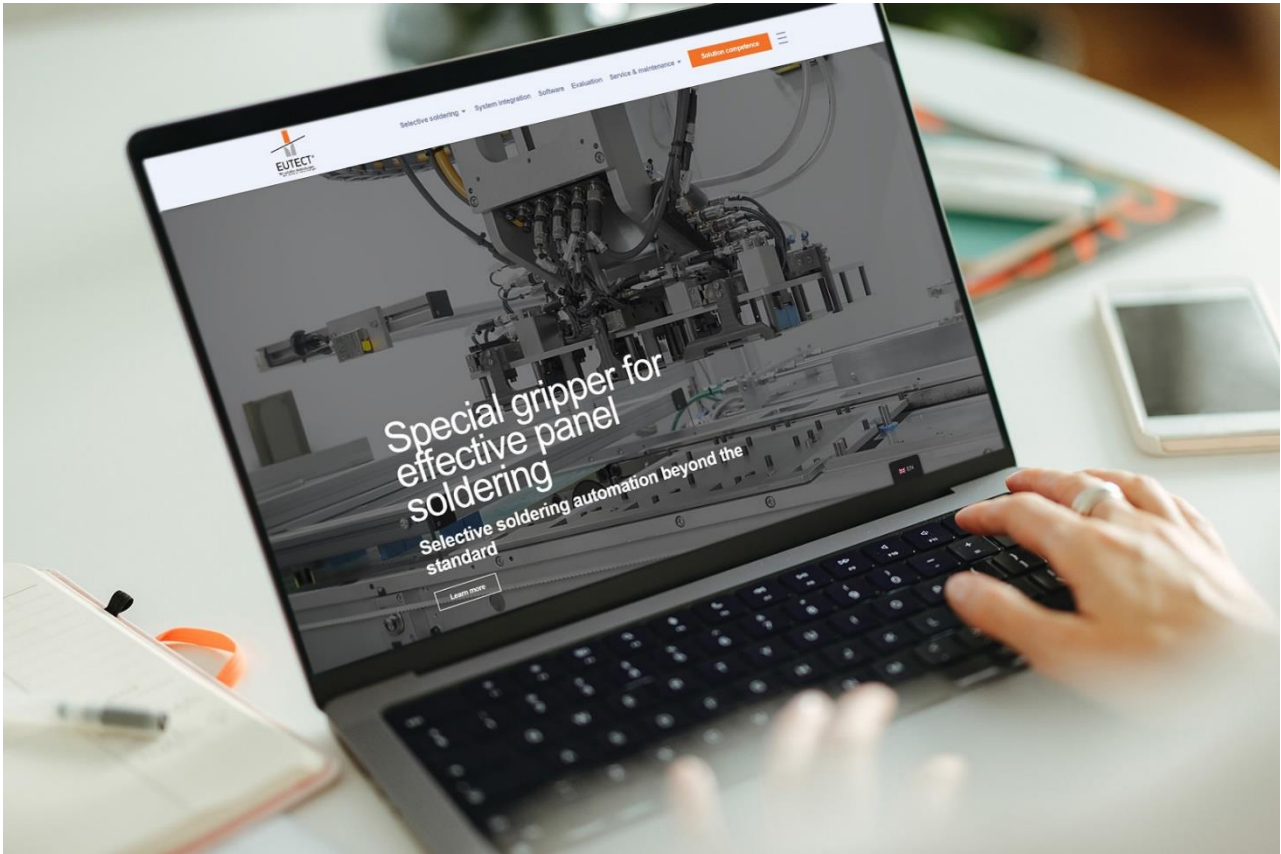

A technologically comprehensive, innovative EUTECT technical center is available for optimal solution through evaluation or the manufacture of A-B-C prototypes ready for serial production.
