

## ***New SMT Stencil Clean Roll Honored with Mexico Technology Award***

QUERETARO, MEXICO — September 2022 — ROCKA Solutions today announced that it received a 2022 Mexico Technology Award in the category of Printing Accessories for its new SMT Stencil Clean Roll. The award was announced during a ceremony that took place Wednesday, Sept. 21, 2022 during SMTA Guadalajara in Mexico.

With different printer brands and models, each printer has its own tube specs, diameter, notches, slots, etc. As a result, ROCKA Solutions has developed the new customizable SMT Stencil Clean Roll that helps to decrease part number errors.

The SMT Stencil Clean Roll is used to remove solder paste residues or other viscous materials allocated into the stencil apertures or stencil contact side surface. Based on the material complexion, this stencil paper is capable of working with ultra-fine pitch apertures, improving cleaning cycle time due high absorption and paper texture allowing better vacuum performance.

Additional advantages include the ability to work with all stencil technologies including nano-coated stencil foils, better solvent usage, which provides an excellent solvent application along the stencil surface, good performance with all developed cleaning solvents including IPA and better solder paste removal, increasing PCBs processed during the cycle.

The Mexico Technology Awards acknowledge the latest innovations available in Mexico produced by OEM manufacturing equipment and materials suppliers during the last 12 months. For more information, visit [www.mexicoems.com/mta-awards](http://www.mexicoems.com/mta-awards).
