Sasinno USA Accepts 2023 NPI Award for Selective Soldering

DONGGUAN, CHINA — January 2023 — Sasinno USA is pleased to announce that it received a 2023 CIRCUITS ASSEMBLY NPI Award in the category of Soldering – Selective for its Unit i1. The award was announced during a ceremony that took place Monday, Jan. 23, 2023 in San Diego.

The Unit-i1 is Sasinno's latest generation compact inline selective soldering machine. In less than 55" length, it combines a drop jet fluxer nozzle, bottom IR preheating, selective solder pot and AOI function. The result is a full function station for fluxing-preheating-soldering-inspection.

Unit-i1 can be used as standalone or as a module with the highest flexibility. For volume production, customers can put unlimited boards one after another. For the production of different boards, customers can separate each machine as every machine can work individually.

Introduced in 2008, the NPI Awards program is an annual celebration of product excellence in electronics surface mount assembly. Premier products based on the finest examples of creative advancement in technology are chosen by a distinguished panel of industry experts.

The Sasinno brand stands for “Smart and Steady Innovation.” The company has established a strong worldwide distribution channel with well-trained engineers to support its customers in any location.
