

FOR IMMEDIATE RELEASE

Best-in-Class X-ray Component Counters from VJ Electronix at Productronica, Hall A2, Stand 165

October 2021 — VJ Electronix, Inc., the leader in rework technologies and global provider of advanced X-ray inspection and component counting systems, will exhibit at Productronica 2021, scheduled to take place Nov. 16-19, 2021 at Neue Messe München in Munich, Germany. The company plans to demonstrate their XQuik III and XQuik II Plus X-ray component counting systems with Itronik in Hall A2, Stand 165.

Demand for high-performance X-ray component counters continues to grow amidst the worldwide electronic component shortage. Increased risk of line down situations from stock-outs or inaccurate inventory management is a significant concern. An XQuik component counting system from VJ Electronix is the best choice for electronics manufacturers looking for a solution that is highly accurate, cost-efficient, and reliable.

The XQuik III and XQuik II Plus meet the demands of today's complex inventory requirements with advanced AI component recognition, extremely fast cycle times (< 10 sec. – including barcode scan – on XQuik III, <20 sec. on XQuik II Plus), industry-leading count accuracy of 99.8% or greater across the widest range of components, real-time MES/ERP updates, simple user interface (UI), and competitively low pricing.

Both the XQuik III and XQuik II Plus are designed for automation flexibility. VJ Electronix offers turnkey robot systems and customized interface solutions for customer specific automation integration. XQuik robotic loading and transfer, and pass-through automations are in operation at customer sites worldwide.

VJ Electronix also plans to give Productronica attendees a sneak-peak of a new advanced X-ray inspection system set to be released in the first half of 2022.
