

Press Release

Viscom to Showcase Inspection of Electronics for Different Customer Requirements at NORTEC 2024

Hanover, Germany, December 18, 2023 – **Viscom AG will be exhibiting at NORTEC in Hamburg, Germany, from January 23 to 26, 2024. The trade fair for production brings together many different industries in northern Germany, Scandinavia, and the Benelux countries – ranging from metalworking, robotics and automation to IT solutions and logistics.**

At Viscom's booth A1.841, the automatic optical inspection system iS6059 PCB Inspection Plus is on display, which uses state-of-the-art 2D, 2½D and 3D methods to inspect the most complex electronic assemblies in a fully networked and automated manner. It is representative of the wide range of high-quality machines that Viscom offers for the quality inspection of assembled PCBs and other components. Depending on customer requirements, the focus here can be on the production of different products for a variety of customers and markets or on maximum throughput for very large quantities.

Viscom's presence at the trade fair will be realized on a joint exhibition area together with other players from its own industry environment – these include, for example, the German Electronics Design and Manufacturing Association (Fachverband Elektronikdesign und -fertigung e. V. – FED). Interested trade fair visitors will thus be able to find the topics and contacts they are interested in close at hand. NORTEC 2024 will take place in Hall A1 of the Hamburg exhibition grounds.

The automatic optical inspection system iS6059 PCB Inspection Plus from Viscom for the quality control of electronic assemblies

About Viscom

Founded in 1984, Viscom AG is one of the leading suppliers worldwide in the field of assembly inspection within electronics production. With its headquarters and production site in Hanover, Germany, the company develops, produces and sells high-quality inspection systems from the areas of AOI, SPI, AXI, MXI, wire bond inspection as well as conformal coating inspection. The systems developed and manufactured in Hanover set high standards in terms of accuracy and speed. The product range covers the complete spectrum of optical inspection and X-ray inspection for small and medium-sized companies as well as for large series production. Viscom systems are used for 100% automatic inspection of electronic assemblies such as those used in the production of automotive electronics, aerospace technology or in the manufacture of telecommunications electronics.

Product development also focuses on customer-specific system developments and networking with other production processes for smart factory applications. In order to achieve this, Viscom AG increasingly invests in its own software and hardware development which is constantly defining new standards in inspection technology.

International sales are handled by a broad network of its own subsidiaries, application centers, service centers and representatives. A service team of in-house technicians and application specialists commission Viscom systems worldwide, offering maintenance, conversion and modernization from a single source. In addition, system-specific training courses are offered for customers' operators, programmers and maintenance personnel. Experienced engineers and technicians from the application and service departments share their expert knowledge with participants.

Viscom AG has been listed on the Frankfurt Stock Exchange since 2006 (ISIN: DE0007846867).
