

Assel invests in a new X-RAY machine

Assel - an Electronics Manufacturing Services (EMS) provider, with more than 40 years of experience in electronics assembly, invests in new X-RAY.

The new X-RAY Quadra-3 replaces the oldest one Dage 7500nt from 2007. The new machine has more power, which allows you to x-ray materials of greater thickness. It also has the ability to overexposure in better quality (HDR), which affects the better visibility of all the details of the overexposed place.

Some other innovations:

- Shows and compares up to 4 x-rayed places with descriptions in one photo
- Allows to create automatic verification programs in electronic packages, e.g. BGA systems, verification, measurement of air voids under thermopads
- Has the option of sending a finished inspection report automatically
