## CE3S Introduces PACE MBT450 to Bring More Flexibility to Rework and Repair

**HARRISBURG, PA — May 2026** — Cumberland Electronics Strategic Supply Solutions (CE3S), your strategic sourcing, professional solutions and distribution partner, is now offering the PACE MBT450 from PACE Worldwide, giving customers a more flexible option for handling rework, repair, and operator training in a single platform.

Rework has always been a balancing act—too many tools, not enough space, and processes that depend heavily on operator experience. The MBT450 tackles that head-on by consolidating multiple functions into one system while keeping the interface simple enough for day-to-day use.

At its core, the system offers 3 independent power channels, and supports a 4th, the TF-Ultra Hot Air/Convective Handpiece, as part of its total rework capabilities, allowing teams to run multiple handpieces at once without constantly switching setups. That kind of flexibility can make a real difference in high-mix environments or on lines where time between jobs matters.

The 4.5-inch color touchscreen is designed to be straightforward, with a customizable interface that lets operators set up workflows that match how they actually work—not the other way around.

One of the more practical additions is built-in video capability with audio. Training materials can be loaded directly onto the system via USB, making it easier to standardize processes, onboard new operators, and keep best practices consistent across shifts.

The MBT450 is built with high-reliability applications in mind, aligning with the needs of industries like aerospace, defense, and industrial electronics, where precision and repeatability are critical.

For CE3S, the system fits into a broader approach that goes beyond supplying equipment. The company works closely with customers to support day-to-day operations through vendor-managed inventory programs, dedicated account management, and services tailored to specific production environments. CE3S also supports government programs and understands the added requirements that come with them.

Rather than adding another standalone tool to the bench, the MBT450 gives manufacturers a way to simplify rework while keeping control where it matters—at the operator level.
