**CE3S Launches Online Workbench Configurator for Treston and IAC Solutions**

**HARRISBURG, PA — March 2026 —** Cumberland Electronics Strategic Supply Solutions (CE3S), your strategic sourcing, professional solutions and distribution partner, today announced the launch of its latest online configurator for Treston and IAC workbenches and storage accessories. The new tool enables manufacturers to design and visualize customized workstation setups tailored to their specific production needs.

The interactive configurator allows users to select pre-designed options to customize, or build complete workstation environments in real time, selecting from a range of modular components, accessories, and configurations. The platform supports everything from cost-effective standard workbenches to advanced, fully adaptable designs integrated into existing production lines.

Treston workbenches in the configurator cover a wide range of industrial needs, while IAC solutions add more ergonomic and application-specific options. Together, they give users the flexibility to build workstations that fit their space and workflow.

“The goal of this configurator is to make it easier for customers to design and visualize exactly what they need without guesswork,” said Jeremy Wagner, President, CE3S. “By bringing Treston and IAC solutions into one intuitive platform, users can quickly move from concept to a practical, buildable workstation that fits their environment.”

The configurator provides a streamlined approach to workstation planning, allowing users to explore different layouts, compare options, and visualize how solutions will fit within their

facilities. This helps reduce design time while improving accuracy and alignment between engineering, production, and procurement teams.

As manufacturers continue to prioritize flexibility and efficiency on the production floor, the new configurator supports faster decision-making and more effective implementation of workstation solutions.
