CalcuQuote Introduces Product Change Notifications to Help EMS Companies Catch Component Risks Earlier

Product Change Notification

| | |
|-------------------------|--------------------|
| Manufacturer | STMicroelectronics |
| Part Number | STM3F032CBT |
| Alert Type | EOL Notice |
| Issue Date | May 28, 2026 |
| Last Time Buy Date | Dec 28, 2026 |
| Last Time Delivery Date | Jun 28, 2027 |
| Alert Number | PCN-STM28-2026-05 |
| Document | Alert Document URL |

Never Miss A Critical Product Change

CalcuQuote | ELISA INDUSTRIQ

Dallas, July 2026 – CalcuQuote, a leading supply chain solutions provider for the electronics industry, has launched Product Change Notifications (PCN), a new capability designed to help electronics manufacturers identify component risks before they become quoting, sourcing, or production problems.

Integrated directly into the CalcuQuote workflow, the feature surfaces product changes such as end-of-life (EOL) notices, obsolescence alerts, supplier changes, and expiring compliance exemptions where users already make purchasing and quoting decisions.

For many EMS providers, product change notices are often discovered after a quote has been delivered, a purchase order has been issued, or a build has already been scheduled. By that point, the options are limited and frequently expensive.

"Most teams don't have a visibility problem. They have a timing problem. The challenge isn't finding product change information. It's getting that information in front of the right people while there's still time to act on it." said David Sharp, CEO, CalcuQuote.

The new PCN functionality monitors parts throughout the sourcing lifecycle, beginning with BOM import. During BOM scrubbing, active alerts are automatically identified and attached to affected components, allowing teams to evaluate risks before investing time in pricing and procurement activities.

Monitoring continues after the quote is complete. A BOM that appears healthy during quoting can become problematic days or weeks later when a manufacturer issues an end-of-life notice or product change announcement. CalcuQuote continuously monitors BOMs and notifies users when new alerts are issued, helping teams avoid surprises between quote acceptance and production.

The feature also extends into component search and inventory monitoring workflows. Buyers can view PCN status alongside pricing and availability data, while sourcing teams can track high-volume or strategic parts across multiple customers and receive notifications when new alerts are published.

Each alert includes supporting information such as alert type, issue date, last-time-buy (LTB) dates, last-time-ship dates, alert descriptions, and links to the original source documentation.

For EMS companies managing thousands of active components across hundreds of customer BOMs, the value is straightforward: fewer surprises, more time to react, and better decisions before a supply chain issue reaches the production floor.

Product Change Notifications are now available within the CalcuQuote platform.

About CalcuQuote

CalcuQuote delivers supply chain software built for electronics manufacturing. The platform provides operational intelligence for EMS providers, OEMs, and suppliers across sourcing, purchasing, and quoting in a single, connected system. With real-time supply data and seamless system integrations, CalcuQuote increases visibility, speed, and control across the entire supply chain. Founded in 2014, CalcuQuote serves hundreds of companies worldwide and is recognized as a trusted system for forward-thinking electronics manufacturers. CalcuQuote is a business unit of Elisa Industriq. www.elisaindustriq.com/calcuquote

About Elisa Industriq

Elisa Industriq creates software solutions for operational intelligence by multiplying industrial knowledge with AI innovation. Our businesses – camLine, sedApta, Polystar, CalcuQuote, TenForce, and Gridle – serve over 2,500 clients internationally in the manufacturing, telecommunications, and energy sectors.

Elisa Industriq delivers business value for customers by reducing costs, improving quality, and generating growth. Our software solutions integrate with customers' existing systems to optimize their operations in

areas including manufacturing execution, supply chain optimization, network analytics, and energy management.

Elisa Industriq is part of Elisa, a pioneer in telecommunications and digital services headquartered in Finland. Our shared mission is a sustainable future through digitalization. Elisa Industriq employs over 1,500 experts in Europe, Asia, and North America. [elisaindustriq.com](https://www.elisaindustriq.com)
