See ERP Built for EMS in Action: Cetec ERP at APEX 2026

Austin, TX (February 2026) – Cetec will exhibit at the 2026 APEX EXPO, held March 17–19, 2026 at the Anaheim Convention Center, where the company will demonstrate its full-suite ERP platform at Booth 3814.

APEX EXPO brings together the electronics manufacturing community, including EMS providers, PCB manufacturers, and electronics assembly teams. Cetec ERP will be available throughout the event for in-person demos and working sessions focused on the operational needs of EMS and PCBA environments, including quoting, BOM and revision control, inventory and traceability, material planning, production control, quality workflows, and integrated financials.

Cetec ERP has an established and growing customer base in electronics manufacturing, supporting EMS teams that need one system to manage the day-to-day movement of parts, jobs, documents, and requirements from quote through shipment. At APEX EXPO, Cetec ERP will focus on practical demos and direct conversations about how electronics manufacturers run, how data flows across departments, and what it takes to keep execution consistent as volume and complexity increase.

Attendees are invited to stop by Booth 3814 to see the platform live and discuss how Cetec ERP can support an EMS business with a fully integrated system that can be configured around real workflows.

ABOUT CETEC ERP:

Cetec ERP is disrupting a stagnant, high dollar industry that has resisted change for decades. Since 2015, and without any major marketing initiatives or venture capital funding, Cetec ERP has independently migrated hundreds of companies off legacy technology platforms like Oracle and NetSuite, saving companies hundreds of thousands of dollars, onto a new generation of lower cost ERP technology.
