As part of the event’s technical conference, Jordan Jolly, Director at Cetec ERP, will present a session titled "Integrating Internal Failure Tracking and Cost of Quality into Manufacturing Processes" on Wednesday, May 7 at 10:30 a.m. This session will provide valuable insights into tracking internal failures, optimizing cost allocation, and leveraging integrated ERP systems to improve profitability and quality management.

In manufacturing, understanding the Cost of Quality (CoQ) is essential for identifying inefficiencies and improving bottom-line performance. Jolly’s presentation will focus on the importance of tracking labor, finished goods material, and raw material costs associated with internal failures. By integrating real-time inspection failure tracking into ERP systems, manufacturers can visualize total material and labor costs, enabling data-driven quality improvements.

“With proper inspection and failure tracking, companies can gain actionable insights to reduce costs and enhance operational efficiency,” said Jordan Jolly, Director, Cetec ERP. “Our goal is to help manufacturers integrate CoQ principles seamlessly into their ERP systems for smarter decision-making.”

Manufacturers attending EWPTTE 2025 are encouraged to visit Cetec ERP’s booth to learn how its fully integrated platform simplifies quality tracking, cost management, and production optimization. Cetec ERP provides an affordable, cloud-based solution that combines ERP, MES, QMS, CRM, MRP, and Accounting into a single, streamlined system tailored for modern manufacturers.

**ABOUT CETEC ERP:**

Cetec ERP is disrupting a stagnant, high dollar industry that has resisted change for decades. Since 2015, and without any major marketing initiatives or venture capital funding, Cetec ERP has independently migrated hundreds of companies off legacy technology platforms like Oracle and NetSuite, saving companies hundreds of thousands of dollars, onto a new generation of lower cost ERP technology.
