## Cetec ERP Launches New Website Focused on Practical Manufacturing ERP and Flexible Implementation

**AUSTIN, TX (April 6, 2026)** - Cetec ERP, supplier of a web-based ERP platform for manufacturers, has launched a redesigned website that better reflects how manufacturers evaluate, implement, and run a complete business system.

The update supports both prospective and existing customers with improved access to product information, documentation, and resources, along with a more direct representation of how Cetec ERP is used across a wide range of manufacturing environments.

### Practical Path to Evaluating and Using ERP

For many manufacturers, evaluating ERP systems is difficult. Information is fragmented, systems are presented generically, and it can be hard to determine whether a platform will fit the realities of a specific operation.

At the same time, existing ERP users need fast access to documentation, how-to guides, and best practices to support daily operations, training, and continuous improvement.

The updated Cetec ERP website is designed to address both needs. It provides a more structured way to evaluate the system up front, while also making it easier for current users to find the resources they need to operate and improve over time.

## **A Complete System, Built for Manufacturers**

The updated site reinforces Cetec ERP as a full-suite system designed to run the entire manufacturing business, including quoting, inventory, production, quality, shipping, and accounting.

It also reflects the platform's applicability across a wide range of manufacturing industries, including electronics manufacturing (EMS/PCBA), medical device, aerospace and defense, industrial equipment, and contract manufacturing environments.

Rather than presenting ERP as a collection of modules, the site emphasizes the single, integrated system that is already built to handle the operational requirements of manufacturing companies.

## **Introducing “Build Your Way” Concept**

The redesigned website centers on Cetec ERP's core message: Build your way.

Manufacturers operate with different processes, constraints, and requirements depending on their industry and stage of growth. Cetec ERP is designed to support that variability within a single platform.

Whether a company is managing traceability in a regulated environment, coordinating complex BOM structures, or running high-mix, low-volume production, the system can be configured to match how the business operates.

This “any manufacturer” approach is reflected directly in the updated site, with clearer paths to industry-specific use cases, workflows, and best practices.

## **Practical, Accessible, and Built for Adoption**

The website update reflects Cetec ERP's focus on practical systems that manufacturers can adopt and use without unnecessary overhead.

The updated visuals introduces a more consistent presentation across the website, with elements that will continue to carry into the product interface.

The focus is on usability and consistency, ensuring that how the system is presented aligns with how it is used in practice.

## **Site Enhancements Include:**

- More direct navigation of features, industries, and workflows
- Easier access to documentation, how-to content, and support resources
- Clearer presentation of pricing and licensing

Cetec ERP maintains a transparent pricing model designed to make a complete manufacturing system accessible to small and mid-sized companies, with no upfront costs and a straightforward monthly payment structure.

This approach supports faster starts, simpler implementations, and long-term scalability without requiring significant capital investment.

## **Support Beyond Implementation**

Cetec ERP continues to emphasize direct, involved support from a team that works closely with manufacturers.

The updated organization of support resources makes it easier for users to find answers, follow established workflows, and stay current with new features, integrations, and system updates.

This reflects an approach where support is not separate from the product, but part of how customers successfully operate within it.

“Our goal is to eliminate obstacles for manufacturers evaluating ERP. Companies want to understand what the system actually does, how it works, what it will take to implement, and how quickly they can get value from it. This website update is about making those steps easier, whether you’re evaluating Cetec ERP or already using the system,” said Taylor Wagen, COO at Cetec ERP.

## **About Cetec ERP**

Cetec ERP is a web-based, full-suite manufacturing ERP system designed for small and mid-sized companies. The platform combines CRM, MRP, production management, quality, and accounting in a single system, with a focus on practical implementation, transparent pricing, and long-term usability.
